STEEPLECHASE TO CLOSE WITH 3 DAY CARNIVAL

Captain Paul Boyton, of Steeplechase falsad is planning to close the season at that resort with a three days carnival to begin on Saturday, September 7 and tenginate Labor Day, which will end the regular season. If the will end the regular season of the captain is now booking special attractions and arranging for a programme of special features all of which will be free.

There will be a continuous program of ovents including foot racing and other contests on the trail, water ports, wrestling match, boxing exhibition, band concerts, fireworks, brise waltzes and other attractions hat will constitute an attractive programme for an auspicious closing of the resort. It is reported that during he winter the island will be entirely emodeled and a large sum expended improvements and new amuse apart devices.

AUTOIST ACQUITTED ON
MANSLAUGHTER CHARGE.
South Norwalk, Aug. 25.—George L.
Lockwood, who has been on trial on a
charge of manelaughter for causing
the death of George W. Johnston by
strings him with an automobile several weeks ago, was acquitted yesterday afternoon by Judge Lockwood.
The judge found that Lockwood was
detring the machine carefully and had
his lights going as prescribed by law
and that Johnston was deaf, which
was partly responsible for the fatality.

Some people tolerate roaches and waterbugs in the kitchen, in vain belief that the rest of the family will not find it out. Perhaps they will not, but suppose that some day you would serve a roach in the pie: per-haps then you would wish that you had spent 20c for a box of Cyrus

OWNERS OF THE **NEW HAVEN ROAD**

Mutual Life Still the Largest Holder, While Aetna Life Is Selling Out

N. Y. CENTRAL THIRD

Pennsylvania R. R. Fails to Appear on List_Some Directors Have No Stock

The latest statement concerning the present owners of the New Haven road, coming out in consequence of the exchange of Boston and Maine shares for those of the New Haven, will lead the much-talked about "widow and orphan" owners of the latter property to take somewhat of notice.

This exchange has changed consider ably the personnel of the largest stock holders in the New Haven road.

The American Express and Standard Oil interests, formerly dominant in Boston and Maine, have now a large voice in the affairs of the New Haven property.

The Mutual Life Insurance company of New York still retains the largest individual interest, and this has not been affected by the Boston and Maine affection.

The American Express company is the second largest holder. The New Tork Central. In exchanging its Bos-ton and Maine for New Haven, has in-creased its holdings by nearly 6,000

First National bank of New fork, which was credited with an own-rship of 2,000 shares on May 1, 1908, s not now a stockholder.

WEN MARRED LOOKS OF ANNIE SIERING

The suicide of Annie Siering, the New Britain girl, who ended her life with a dose of strychnine at the Atlas hotel, yesterday morning is said to have been due to despondency arising out of a disfigurment in the form of a wen upon one side of her face. This defect always occasioned her the keenest sorrow. By continuous dwelling upon the subject she finally came to believe life not worth living. She was suffering from disease which she believed to be incurable and was slightly crippled. She was the daughter of Mrs. Peter Siering who lives on Slater Road, New Britain. She was a little more than 19 years of age. Her funeral will take place in New Britain tomorrow.

BY COMPANY

Document Prepared by President English of United Illuminating Company and Presented to Council Committee.

The statement presented to the spe cial committee investigating the local electric light situation last evening by Judge A. B. Beers for the United IIluminating Company, as prepared by James R. English, president of the company, follows:

The street lamps at Bridgeport are produced and distributed from the Congress street station. During the period from 1905 to 1909 there has been no change in the methods of generating or distributing.

The costs as given herein are those taken from the books at the close of and the costs.

dated March, 1906, contains the following section:
Section 12. "It is hereby agreed that
if the cost of production of electricity
for the operation of lampe as specified
herein be cheapened during the continuance of this contract, that said company will reduce to said city the price
of said lamps in a sum equal to the
reduced price of production as aforesaid."

raid."

The lamps contracted for were those at that time in operation lighting the streets of Bridgeport. These same lamps, except such as have been changed for repairs and additions to the service, are in operation today. The apparatus for the producing of these lamps has been maintained to the greatest point of efficiency by a liberal expenditure for repairs and maintenance.

maintenance.
Since the making of this contract
the cost of labor has been materially
advanced per day as per the following
schedule:

Wages of engineers \$2.50 \$2.57
Wages of firemen 2.00 2.14
Wages of Dynamo men 1.97 2.33
Wages of Trimmers 1.75 2.00
The above shows an average increase in the rate of pay per day of 12.1-2
per cent.

in the rate of pay per day of 12 1-2 per cent.

The cost of the coal used for fuel, has been advanced from \$3.50 per ton in 1906 to \$3.85 per ton in 1909. An increase in cost of 10 per cent.

All other minor labor, and the costs of wire, carbons, oil, waste and all other supplies and materials used in the production of electricity have been advanced since the contract was made.

The company, however, has enjoyed

made.

The company, however, has enjoyed the benefits of an increase in the volume of business done, hence, while the cost per day for labor has increased, the output of electricity per dollar of wages has increased. The cost of coal, due to the advance in price per ton has increased the cost per lamp.

The total result of these advances as shown by the costs of production, as whole, show that the actual operat-ing cost to the United Illuminating Company per are lamp furnished has increased \$2.26 per lamp since the con-

tract was made.

The price fixed by the contract, for the lamps as used in 1906 was \$79.75 per lamp per annum, but with an increase in the number of lamps used, the price was reduced to 21 1-2 cents per lamp per night. A reduction of \$1.28 per lamp per year. METHOD OF PRODUCING ARC LIGHTS 1909.

The purpose of this is to show what advance, if any, has been made in the art of producing electric arc lamps for street lighting, since the contract was made between the city of Bridgeport and the United Rhuminating Company, in March, 1905. in March, 1906. In 1906 two methods were employed

other, and from point of cost either one was equally efficient. The A. C. method however had the additional disadvantage of more frequent outages, due to line troubles, than the first had.

Since 1906 the electrical manufacturers have been endeavoring to improve the methods for producing are lamps. The first of any moment was the so-called "Tetanium Lamp," but as this proved a practical failure it has been abandoned.

The second attempt was the "Luminous Arc" or Magnetite system. This consists of elternating current generators, either engine driven or turbine driven, with tub transformers and mercury are rectifiers. This system uses an enclosed lamp.

Experimental sets of 50 lamps of this new method were installed by the manufacturers in 1908, but developed, like all new inventions, many troubles.

Impressed with the probable outcome.

ilke all new inventions, many troubles.

Impressed with the probable outcome of this method, the United Illuminating Company Inestalled a trial set in December. 1993. So many difficulties in the practical working of the devices occurred, that for a time it looked hopeless. The makers kept their experts at work upon it daily for three months, and after developing some new and additional devices and safes the following condition in May. 1999, and then the Illuminating Company decided to adopt the system, and orders were given for the requisite steam turbine driven units and lampe and other necessary equipment for the replacing of all of its street lamps with the most modern known system of lighting.

This system has now been adopted by Boston, Worcester, Taunton, Fall River and Hartford and many others. The Illuminating Company are proceeding as rapidly as possible with the changes, but are dependent upon the manufacturers of the appliances for delivery and installation.

It will probably be in working condition in Bridgeport in the early fall, but will require some weeks in which to make the necessary changes in the street system, and educate employes to economical methods of handling the work. The first cost of the installation two sets of hands must be employed, until the changes are complete, no economy in operation can be looked for.

Theoretically, with this new system.

economy in operation can be looked for.

Theoretically with this new system

the cost of producing arc lamps should be reduced. Practically, the method is so new, lamps have been used for so short a period, that no actual experiences, extending over a reasonable

periences, extending over a reasonable time, are available, to determine the ultimate economy of the system.

The lamp requires the same amount of energy sent out on the line, as that required by the open arc lamp, hence no economy can be looked for in this direction, as to the cost per lamp for current used.

The new lamp, being of the enclosed type, does not need trimming as frequently as the open arc lamps. But how long this new lamp will burn without such an accumulation of dirt in the globe as to require cleaning, is to be demonstrated.

The new lamp uses a special form

After a most careful and full analysis of the economy and advantages claimed for the new method, with a strong faith in its ultimate outcome as the modern method of street lighting, the company have contracted for the requisite plant for street lighting in New Haven and Bridgeport.

To elminate the resistance to speed caused by an ordinary rudder, an inventor has brought out a steering device for high speed craft in the form of a horizontal shaft bearing a number of spirally arranged blades, driven by a motor, to direct the stern of a boat in either direction.

THE PRETTEST FACE and the most beautiful hands are of-ten disfigured by an unsightly wart. It can easily be removed in a few days without pain by using Cyrus' Wart Remover, for sale only at The Cyrus Pharmacy, 252 Fairfield avenue and 186 Cannon St.

CLEANEASY, THE BEST HAND Guaranteed not to injure the skin, instantly removes Stove Polish, Rust, Grease, Ink, Paint and Dirt. For the hands or clothing. Large can 10 cents. Manufactured by Wm. R. Winn, 246 Stratford Ava.

GIFTS FOR THE LEADERS

Senator P. L. Holzer, of the 21st senatorial district, was present at the senatorial district, was present at the closing day of the seasion in that body yesterday. It was the first time the senator put in an appearance in several weeks, being detained at his bank in Bridgeport while the votes were being recorded upon the public utilities bill, the employers liability bill and on the bill limiting damages in violent deaths to \$5,000. The senator explained that owing to Frank T. Staples his business associate being away on his vacation he found it impossible to attend the kessions of the senate.

The senate yesterday presented to its

without such an accumulation of dirt in the globe as to require cleaning, is to be demonstrated.

The new lamp uses a special form of electrodes, costing ten times as much per electrode as those used in the open arc lamps. The electrode, in the open arc lamps. The electrode, in the open arc lamps. The electrode in the open arc lamps. The electrode, in the open arc lamps. The electrode in the open arc lamps. The electrode, in the open arc lamps. The electrode in the open arc lamps. The electrode in the open arc lamps. The electrode in the way of economical open arc lamp is such at the cost will ultimately be reduced, and its useful life lengthener, thus effecting an economy. The apparent advantages of the new system over the old arc:

First. The method of the construction of the lamp is such that they are not affected by sleet and ice storms, or high winds, to the same extent as the open arc lamp. Third. The lamps are much more difficient. The manufacturers of Magnetic lamps is that they give 30 per cent. more light for the same energy expended than the open arcs are full material.

Fourth. It would appear, from a careful examination of the system, that ultimately after all troubles are eliminated, and the manufacture of Rectifers and Electrodes becomes more general, thus costing less, that the method should result in a marked accomony in the cost of street lighting.

Shaft Went Through

Shaft Went Through Cab—Ahern Drunk

When Herman Sawyer turned the ceach he was driving from Main street into East Washington avenue last night it came into sudden contact with the team which James Ahern of Stratford was driving. The shaft of the Ahern rig made a good sized hole in the side of the cab. Ahern was fined to and costs to-day on the charge of drunkenness.

MAN WHO SHOT ON ST. ROCCO'S DAY

Gaetano Leppello, chairman of the St. Rocco day celebration, who shot Angelo Lota in the leg on Sunday night was to-day bound over to the next term of the Superior court under \$500 bonds. He was represented by Attorney Henry Greenstein. No hearing was held but a demutrer proforma was entered by Attorney Greenstein. Judge Foster went through the formality of overruling the demutrer and binding the prison over on the charge of assault with intent to kill.

In warfare on mosquitoes in some of the German Colonies in Africa some success has followed the planting of the arzolla plant, which covers the KELS—In So. Norwalk, Aug. 11. Miss George Wells, aged 78 years. LAYHE—In Norwalk, Aug. 12. Mary Layne.
